PERSONAL STATEMENT

Highly motivated IT professional with a passion for automation and a proven track record of resolving complex technical issues. Enthusiastic about applying infrastructure automation and problem-solving skills to streamline IT operations and drive efficiency. Looking to leverage experience in cloud technologies and experience in scripting in a 3rd line support, application support, or DevOps role.

WORK HISTORY

Support Analyst / Resonate OCTOBER 2024 - PRESENT

- Support and maintain our traffic management software solution, simulation and training systems.
- Provide remote support to support commissioning activities or to facilitate incident resolution.

SME Support Engineer / Kerv MARCH 2023 – MARCH 2024

- Worked as one of three engineers on a project for a large bank that involved migrating calls from various Nice NIM systems to Verint 15.2 WFO systems.
- Created multiple SQL scripts to 'normalise' the call data from the Nice databases into a format that the Verint import manager could understand. This involved gathering the data from various tables with various relationships and converting it into a single, large, table.
- Created a powershell script to automate the retrieval of calls from EMC Centera, this was needed as part of the project due to a limitation of the import software. The script polled the database at a regular interval and pulled the call audio using an API in batches as needed.

IT Engineer / Red Box Recorders OCTOBER 2020 – MARCH 2023

- Provided technical support and troubleshooting to customer IT teams and resellers of redbox voice recording software.
- Identified, replicated and reported bugs to the development team.
- Helped develop and manage the knowledge base as new issues became apparent and new features were released.
- Deployed, integrated and troubleshooted the new microservices based redbox platform on customer environments.
- Created Kibana dashboards to report on key information that was required by customers, which was stored in elasticsearch.
- Rolled out new containers within kubernetes as patches became available.
- Developed a python script that replaced a comprehensive manual healthcheck of the system that support engineers would do. This included checks within linux, kubernetes, eventstore, and nats which then reported into a slack channel via webhooks. This saved around 20 hours of support time per week at the time of implementation.

Systems Engineer / Iomart Hosting

OCTOBER 2019 – SEPTEMBER 2020

- Provided technical support and advice for the data centre infrastructure of many clients.
- Installed, Supported and troubleshooted the server hardware and Vmware hypervisors for both Iomart and customers own private cloud.
- Support and troubleshoot customer environments including Cisco ASA and firepower firewalls, VPNs, MSSQL and MySQL servers, Apache and Nginx web servers, barracuda and HAproxy load balancers, Postfix mail servers and Vmware Horizon VDI servers.

IT Analyst / Buzz Bingo

FEBRUARY 2019 – SEPTEMBER 2019

- Provided technical support and assistance to head office of around 300 users and around 50 remote club locations.
- Configured and inventoried laptops and phones for new starters and leavers.
- Prepared technical tools for executive board meetings.
- Owned a project where I rolled out software updates to club servers using Symantec management software.

Project Engineer / Applied Tech Systems

JANUARY 2018 – OCTOBER 2018

- Imaged and installed windows PC's using SCCM to modernise the manufacturing floor at Rolls-Royce.
- Installed proprietary software and integrated these PC's with existing manufacturing machines.
- Worked with third parties to ensure that network ports were installed and configured correctly.
- Went above and beyond to provide support to Rolls-Royce for a machine bay that was out of scope for the project. I brought the machine bay back into production, shielding the company from £1.4 million of potential lost revenue. This also helped to strengthen the relationship between Applied Tech Systems and Rolls-Royce.

IT Support Technician / Better-IT Limited

JULY 2013 – DECEMBER 2017

- Provided IT support and advice to small and medium sized businesses across the east midlands.
- Assisted with the move of IT equipment between offices.
- Managed office 365, websites, NAS's, network equipment and phone systems of 50+ companies.
